

HAND DRYERS

DESIGNED FOR THOUSANDS OF HANDS

A public restroom has to work — even for visitor number 1,000. That's why our hand dryers are designed to be used again and again. They are touch-free, efficient, and gentle — both on hands and on the environment. Designed for everyday use, for routines, and for places where many people pass through — but only stay for a few seconds.

A hand dryer should do more than just dry hands. It should be elegant, practical, and reliable — without guests having to think about it.

With more than 40 years of experience in design and manufacturing, we know what it takes. Our solutions are internationally recognized for combining durability with sleek design. Quality, design, and reliability are present across our entire range — from classic hand dryers to state-of-the-art, high-speed models in all price ranges and for every need.

Electric hand dryers are an efficient and energy-friendly solution that ensures presentable and hygienic restroom facilities. They reduce the hassle of paper, save storage space, simplify maintenance and cleaning — and lower the CO₂ footprint.

The demands for a healthy and clean indoor climate are higher than ever, and good hand hygiene has been important since COVID-19.

Many of our hand dryers are available with HEPA filters, which capture 99.7% of airborne particles and bacteria, making the air cleaner and giving users greater peace of mind.

There are places where
people stay for a moment.
And where the design must
perform every single second

BJÖRK
